

## ROCK CONSTRUCTION INDUSTRY – Strong demand from 2H2020

Construction rock is an essential material in public infrastructure and residential projects. Rock products are mainly derived from magma, sedimentary and metamorphic rocks. Demand for construction rock is served locally due to high transportation costs and large local reserves. There are four main factors that determine the selling price of the products: supply and demand, mine location, stone quality and color.

**Demand for houses in the Southwest region continues to be healthy.** The demand for construction rocks in the Southwest region has been largely served by the Southeast mines in the past few years. Among the 13 provinces in the Mekong Delta region (or Southwest region), only An Giang and Kien Giang have rock quarries. Although over the past ten years the number of newly built houses and the number of square meters of built houses in the Mekong Delta region have always been higher than in the Southeast region, the percentage of households without a home in that region is still the highest in the country. Despite of the same starting point of 5.7 per thousand households without their own house in both regions in 2009, this figure decreased to 1.2 per thousand in the Southeast region, while the number was 4.2 per thousand in the Mekong Delta region at the end of 2019. For current quarries of listed enterprises, mine clusters near Dong Nai river such as Thanh Phu, Thien Tan, Tan My may have an advantage of delivering from the Southeast to the West. In particular, VLB and CTI are the two companies that own the largest rock reserves in these areas.

**Public investment has shown signs of rising again.** Although the transportation demand between the two areas of Ho Chi Minh City and Southwest region is high, only 40 km of expressways (Ho Chi Minh City - Trung Luong) has been built in the South among the total 1,000 km of highways in Vietnam. Understanding the necessary of infrastructure in the South, by the end of 2019, the Government closely instructed to secure capital for the Trung Luong - My Thuan Expressway project. For highway projects to the Southwest region, rock quarries of VLB, CTI, DHA and KSB near Dong Nai river area could deliver to these projects by waterway. While mine clusters in the Tan Cang area would be favored once Long Thanh Airport project starts construction. In addition, these mines could provide rocks once the Dau Giay - Phan Thiet highway begins construction, although the location is not as favorable as the Soklu mines of VLB or Xuan Hoa mine of CTI.

**Replacing Tan Dong Hiep and Nui Nho quarries.** According to our estimates, Tan Dong Hiep and Nui Nho accounts for about 10% market share of construction rock in the Southern region. However, after two successful renewals, the two quarries have officially stopped mining since the end of 2019. Currently, mining enterprises in these two areas such as KSB, NNC and C32 can only collect the leftover during the process of restoration of the environment. As a result, the supply from these two quarries will decrease in 2020 and 2021 and will completely disappear afterwards. Based on the quality of rock and location, the Tan Cang mine cluster in Bien Hoa, Dong Nai emerges as the main candidate to replace the two quarries. A number of listed companies own quarries in this cluster such as VLB, DHA, CTI, DND and DGT. Among them, VLB has the largest area with a long-term exploitation license.

### Notable stocks in the industry

| Ticker | Recommendation | Market cap (Bn VND) | Avg. Daily Volume (20 days) | Target price | ROE (%) | ROA (%) | Dividend yield (%) |

### Construction rock in South Vietnam

Currently, listed companies in the construction rock industry operate mainly in the Southern region. Therefore, our note will focus on this region.

Construction rock is an essential material in public infrastructure and residential projects. Products are mainly derived from magma, sedimentary and metamorphic rocks. There are currently hundreds of rocks derived from these three rocks, but only some common stones are used as construction rock such as basalt, andesite, granite, rhyolite and gravel.

Demand for construction rock is served locally due to the characteristics of the rock and local rock reserves. Construction rock has high density, which can reach up to 3,500 kg / m<sup>3</sup>, resulting in high transportation costs. As a result, the selling price at agencies may be a couple times higher than at the mines. Meanwhile, the current reserves in the Southern region are still very large and can completely meet the demand for construction rocks in the long run. Hence, we believe that in the coming years, the demand for rock in the Southern region will continue to be served by local suppliers.

Among the Southern provinces that have rock mining, Dong Nai and Binh Duong possess the largest planned reserves of over 480 mn m<sup>3</sup> and 230 mn m<sup>3</sup>, respectively. Most of the quarries of listed companies such as VLB, KSB, NNC, DHA or CTI are located in these two provinces. Meanwhile, only An Giang and Kien Giang have rock mining with planned reserve of 130 mn m<sup>3</sup> and 60 mn m<sup>3</sup>, respectively, among 13 provinces in the Mekong Delta region.

(\*): 2016-2030; (\*\*): 2016-2035

**Mining and delivering construction process.** The process of quarrying and processing rock will often go through five basic steps:

- (1) Clearing the top layer at the mines
- (2) Deleting weathered rocks by drilling
- (3) Using explosives to break rocks before transporting them to rock crushing stations
- (4) Crushing rock to required size such as 1\*2, 2\*4, etc. (**Table 1 for more details**)
- (5) Garthering product to storage or delivering products to customers

It can be seen that the process of mining and processing construction rock does not require too much technology. Therefore, rock quality among companies is almost not much different in the same mining area.

**Figure 2: From mining to delivering rocks**

Source: DHA, Rong Viet Securities

**Table 1: Products of crushing rocks and its usage**

| Product type | Size (mm)   | Usage                                                                                                                                                       |
|--------------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| "Da mi"      | 0 to 5      | "Da mi" is a by-product created during crushing other types of rocks. It is used in the composition of hot and cold asphalt or in making block bricks, etc. |
| 0*4          | 0*(5 to 40) | The product is used in building new roads or fixing part of a road. In addition, it is also used as material for backfilling in construction.               |
| 1*2          | 10*25       | The product is used as a material in concretes to build high-rise buildings, airport, wharves, national highways, etc.                                      |
| 4*6          | 40*60       | This stone is used as a base for bricks, floor tiles and an additive to concrete.                                                                           |
| Rip rap      | 100 to 300  | The product usually does not have a uniform size. Its usage is quite similar with 4*6 type.                                                                 |

Source: DHA, NNC, Rong Viet Securities

### Essential factors for the selling price

There are four main factors that determine the selling price of rock products: supply and demand, mine location, stone quality and color. The supply in the Southeast region is quite abundant as Dong Nai and Binh Duong provinces alone had 56 mining licenses by the end of 2017, mainly in Thuong Tan, Tan My, Thanh Phu, Thien Tan and Tan Cang area. Meanwhile, competition is lower in Binh Phuoc quarries of DHA and NNC, Xuan Hoa quarry of CTI and Phuoc Vinh quarry of KSB. However, the market for these mines is limited versus those mines near the center of Dong Nai and Binh Duong. On the other hand, high quality rock such as andesite will often cost more than sandstone. Additionally, the green color of the rock is also preferred over black or yellow.

### Demand for construction rock will start to rise from 2H2020

Demand for rock in the Southern region correlates with local construction activities. According to FPTC 2016 statistics, the Southwest accounts for 49% of the total consumption of the whole Southern region, followed by the provinces of Ho Chi Minh City (26%), Binh Duong (10%) and Dong Nai (8%). Housing demand in the Mekong Delta provinces has been high for many years as the number of houses built was even 1.4 times that of the Southeast region in 2017.

### Housing demand in the Southwest region remains high

Although over the past ten years the number of newly built houses and the number of square meters built in the Mekong Delta region have always been higher than in the Southeast region, the percentage of households without their own house in the area remains the highest in the country. Moreover, despite of the same starting point of 5.7 per thousand households without their own house in both regions in 2009, this figure decreased to 1.2 per thousand in the Southeast region, while the number was 4.2 per thousand in the Mekong Delta region at the end of 2019. For current quarries of listed enterprises, mine clusters near Dong Nai river such as Thanh Phu, Thien Tan, Tan My may have an advantage of delivering from the Southeast to the West. In particular, VLB and CTI are the two companies that own the largest rock reserves in these areas.

### Public investment has shown signs of rising again

Although the transportation demand between the two areas of Ho Chi Minh City and Southwest region is high, only 40 km of expressways (Ho Chi Minh City - Trung Luong) has been built in the South among the total 1,000 km of highways in Vietnam. Understanding the necessary of infrastructure in the South, by the end of 2019, the Government closely instructed to secure capital for the Trung Luong - My Thuan Expressway project.

- According to our update, the Trung Luong - My Thuan Expressway project is completed at more than 40% as of the end of April 2020 and is expected to be completed in early 2021
- My Thuan Bridge II project to connect the two sections of Trung Luong - My Thuan and My Thuan - Can Tho highways also started in late February 2020 and is expected to be finished in 2023
- In addition, according to the plan approved by the Prime Minister, the Lo Te - Rach Soi route will be upgraded to an expressway by connecting Cao Lanh route and Vam Cong bridge to create another expressway to the West region besides the Ho Chi Minh - Trung Luong - My Thuan - Can Tho expressway. The construction progress of this route is at 80% of volume in February 2020 and is expected to open for traffic in September 2020. The road building for local residents that are around this expressway will also start soon.
- Meanwhile, the expressway (Dau Giay - Phan Thiet) connecting Ho Chi Minh City with the SouthCentral Coast provinces has just been approved by the National Assembly to switch to public investment project from BOT. The construction land is expected to be provided to constructors in May 2020. According to the Ministry of Transport, the project could start in the third quarter of 2020.
- The Prime Minister is also interested in the Long Thanh airport project. In an online meeting in early April 2020 with the Prime Minister, the leaders of Dong Nai province committed to complete land clearance in 2020 and provide it to investors (ACV) before the second quarter of 2021. Additionally, ACV expects to start construction in May 2021 and finish in December 2025. The total investment of the project is over VND 111 trillion on an area of 1,810 ha

For the highway projects to the Southwest region, rock quarries of VLB, CTI, DHA and KSB near Dong Nai river area could deliver to these projects by waterway. While mine clusters in Tan Cang

area would be favored as the Long Thanh Airport project begins construction. In addition, these mines could provide rocks once the Dau Giay - Phan Thiet highway starts construction, although the location is not as favorable as the Soklu mines of VLB or Xuan Hoa mine of CTI.

### Rising demand for industrial parks in 2021

Upgrading public infrastructure not only helps to increase the demand for rocks but it also attracts investment in building factories, industrial parks, resorts and so on. Although Vietnam has an abundant workforce and cheap labor costs, many investors are always concerned about the infrastructure. Especially in the South, infrastructure investment has not kept pace with the region's economic growth for many years. The Northern region, where infrastructure has been developed for years, recorded occupancy rates of over 91% compared to 83% of the Southern region by the end of 1Q2020, according to CBRE.

Currently most countries are still reporting new Covid-19 cases, hence international flights routes have not been reopened. As a result, demand for industrial parks in the South is also affected. However, with a base case of Covid-19 being fully controlled this year and international flights being able to reopen gradually thereafter, the demand for leasing industrial zones may rebound sharply next year. Vietnam in particular and Southeast Asia in general are considered as an alternative destination for China. In the past two years, as the US-China relationship has become worse, Vietnam has recorded more and more companies moving factories from China or opening branches in Vietnam to diversify their supply. Especially after the Covid-19 epidemic outbreak, while the US-China tensions rose, the image of Vietnam in the eyes of international investors improved. Furthermore, the free trade agreements such as EVFTA would help Vietnam to attract more FDI.

Binh Duong province currently has 28 industrial parks and is expected to add seven with a scale of 5,600 ha. Similarly, Dong Nai province's leaders are proposing to add nine industrial parks with an area of over 5,000 hectares, though currently only 31 out of 35 planned industrial parks are in operation. Half of the proposed scale is in the Long Thanh district. Meanwhile, Long An province has leased about 2.2 thousand hectares out of the total of 11.4 thousand hectares in the plan with an occupancy rate of over 85%, according to Official Letter No. 1748 / TTg-CN. The demand for industrial parks near HCMC in provinces such as Dong Nai, Binh Duong and Long An will continue to remain high. This is an opportunity for rock quarries in two areas such as Dong Nai and Binh Duong.

### Replacing Tan Dong Hiep and Nui Nho quarries

According to our estimates, Tan Dong Hiep and Nui Nho account for about a 10% market share of construction rock in the whole Southern region. However, after two successful renewals, the two quarries have officially stopped mining since the end of 2019. Currently, the mining enterprises in these two areas such as KSB, NNC and C32 can only collect the leftover during the process of restoration of the environment. As a result, the supply from these two quarries will decrease sharply in 2020 and 2021, and will completely disappear afterwards. Based on the quality of rock and location, the Tan Cang mine cluster in Bien Hoa, Dong Nai emerges as the main candidate to replace the two quarries. A number of listed companies own quarries in this cluster such as VLB, DHA, CTI, DND and DGT. Among them, VLB has the largest area with a long-term license.

**Table 3: Quarries of listed companies**

| Ticker | Quarries          | District     | Province   | Area (ha) | Reserves in 2019 (m3) | Maturity | Depth (m) | Capacity (m3) | Type of rock  | Production in 2019 (m3) |

### Risks

Because the rock industry correlates with local construction activities, this industry is subject to the business cycle. However, in addition to common risks like other industries, the rock industry is subject to strict supervision from state agencies with regulations and fees.

According to financial statements from companies in the industry, fees related to the mining sector account for an average of 14% of revenue. In particular, the three main types of fee in the field of mining rock are the natural resource consumption tax, the environmental protection fees and royalties. The natural and resource consumption taxes are often the largest cost for companies in this industry. The resource tax rate in the calculation structure also tends to increase in the long term and may increase to a maximum of 15% from the current 10% under the current Law on Resources Tax. The cost of granting mining rights (royalties) has just been added by the State since 2013. In general, taxes and fees of the State tend to increase to supplement the State Budget's revenue and to avoid wasteful of non-renewable resources. ([For more detail about fees](#))

In addition, local authorities scrutinize the process of obtaining new quarrying permits, extension permits or deeper mining permits. Presently, the process of applying for permits takes more and more time as environmental requirements are a big concern. To mine a new quarry, companies would need to join an auction. Meanwhile the exploration of reserves can take several years and in case the rock quality or reserves are not as expected, this would cause cost companies a fortune.

On the other hand, there is currently no product that can replace rocks in an economical way. Although developed countries have used steel slag and cast-iron slag as an alternative, this trend in Vietnam is still underdeveloped and more research is needed to put it into practice.

## HOA AN JSC (HSX: DHA)

### Stable company with favorable mine location

#### 1<sup>st</sup> quarter earning results: In-line with the plan

DHA's first quarter revenue was VND 71 billion, down 3% YoY, but gross profit did not change compared to the same period last year due to a 4% YoY's decrease in cost of goods sold. This may come from the decline in oil and electricity prices in the first quarter. Administrative expenses increased 7% YoY, causing a 1% YoY drop in NPAT to VND 16 bn. By the end of the first quarter, DHA completed 23% of the revenue plan for 2020 and 27% of the profit before tax plan.

More specifically, the main quarry, Thanh Phi 2, recorded a 14% YoY growth in profits, offsetting the sharp decline in profits of Nui Gio (-21% YoY) and Tan Cang 3 (-14% YoY). While the Nui Gio and Thanh Phu 2 fields have completed over 30% of the pre-tax profit plan for 2020, Tan Cang has completed 24% of the EBT 2020 plan.

#### Expectations in 2H2020 and for the next few years: strong demand and favorable locations

DHA's main quarry, Thanh Phu 2, is conveniently located close to the Dong Nai River and delivers easily to the Southwest provinces or riverside districts of Ho Chi Minh City. Meanwhile, the Tan Cang 3 quarry perfectly fits the quality and location requirements to benefit from the shutdown of the two quarries of Tan Dong Hiep and Nui Nho. The supply from Tan Dong Hiep and Nui Nho will decrease in 2020 and will no longer be from 2022. The production in Tan Cang 3 was 81% of capacity in 2019, up from 69 % in 2018. Meanwhile the Nui Gio quarry has received a license to increase its capacity to 300,000 m<sup>3</sup> / year, an increase of 50%. The consumption market of Nui Gio is currently quite less competitive.

The schedule for constructing the two expressways connecting Ho Chi Minh City and the Southwest in late 2020 and early 2021 would boost demand for rocks. The location of those projects is quite favorable for Thanh Phu 2.

#### Prudent plan for 2020

Facing challenges from the Covid-19 epidemic, the company set a prudent target for 2020 with a 9% and 10% YoY decrease in revenue and profit before tax, respectively. Although profit after tax is expected to decrease by 12%, DHA plans to pay cash dividends similar to the plan in 2019. In fact, DHA decided to pay 30% cash dividends from NPAT 2019. The company will pay 15% cash for the remaining dividends of 2019 and 5% cash in advance from NPAT 2020 on June 4<sup>th</sup> 2020 (payment date).

#### Investment plan in 2020

DHA will continue to complete the legal procedure for a deeper permit from the current depth of 60 meter to 80 meter at the Tan Cang 3 quarry. Once it is done, the company would add 4 mn m<sup>3</sup> to 9 mn m<sup>3</sup> in reserve at the quarry.

### Analyst's opinion

DHA's quarries are in favorable positions as the demand for rocks in the South rises again. Hence, the abundant reserves of its quarries would help the company maintain revenue and profit for at least the next five years. Currently, DHA does not finance its capital thanks to the steady positive cash flow from operating activities while their investments are not too large. DHA is trading at a 6.6x PE, around the five-year average PE of 6.5x. We believe that DHA is trading at a reasonable level for this year as revenue and profit of 2020 will be affected by Covid-19. We expect that revenue and profit could recover strongly in 2021. However, a notable point is about the cross-ownership between DHA and C32, the major shareholder of DHA since 2016. DHA has continuously increased its ownership in C32 in the last two years.

## BINH DUONG MINERALS & CONSTRUCTION JSC (HSX: KSB)

### Utilizing medium term resources for the long-term plan

#### 1<sup>st</sup> quarter earnings results: interest expense weighs on results

KSB's first quarter revenue was equivalent to the same period last year at VND 296 bn and was not much affected by Covid-19. However, the company's profit before tax decreased by 9% YoY due to a 66% YoY increase in interest expenses, although the company reduced its selling expenses by 27% YoY. KSB currently has only completed 21% and 16% of its revenue and EBT plan for 2020, respectively.

#### Striving to be the largest supplier in the South

KSB is planning to acquire a company with a large rock quarry reserve in the Dong Nai area. If the deal is successful, KSB could have reserves of more than 150 mn m3, which is six times the current reserve. Quarries of the target company are in a favorable position to benefit from public investment projects or industrial park projects in the South. The consumption market of the target company is also very diverse as one of its quarries is located near the Dong Nai river. Additionally, KSB plans to complete the legal procedure for the Tam Lap mining license with reserves of more than 10 mn m3, which is expected to start mining in 2021.

*Prospects from the industrial park:* KSB is developing the Dat Cuoc industrial park (Tan Uyen, Binh Duong) with a plan of 551 hectares. The steady cash flow from leasing industrial land in the short and medium term is the main source for the company to complete the acquisition of the target company. After having filled 130 hectares of Phase I in Dat Cuoc Industrial Zone in previous years, KSB leased another 45 hectares from the expanded Phase I in 2019. It expects to lease the remaining of 45 hectares in 2020. Moreover, KSB has received a permit to compensate the remaining of more than 180 hectares for the expanded Phase II.

#### 2020 plan: Reality

The company plans a 9% YoY increase in operating revenue while a 4% YoY decrease in profit before tax. Revenue and profit of the rock segment is forecasted to decrease because of the fall in supply of the Tan Dong Hiep quarry. In contrast, the industrial leasing segment is expected to offset that in 2020 and in the next few years. KSB set targets for revenue and PBT of the industrial park segment in 2020 at VND 474 and VND 122 bn, respectively.

#### Analyst's opinion

*KSB plans to utilize short-and-medium term resources for its long-term plan as the company leases the Dat Cuoc Industrial Park to finance M&A. Based on the value that KSB plans to pay for the deal, we think this is a long-term profitable investment. However, it means KSB may retain earnings for the next few years instead of paying dividends. KSB is currently trading at a PE of 4.4x, lower than the five-year average PE of 6.9x. We believe that the market has not fully reflected the long-term prospect of KSB. The biggest risk to KSB is probably that the acquisition continues to stall. The target company is considered as KSB's long-term strategy as the remaining high-quality rock reserves with favorable location is low.*

**DISCLAIMERS**

This report is prepared in order to provide information and analysis to clients of Rong Viet Securities only. It is and should not be construed as an offer to sell or a solicitation of an offer to purchase any securities. No consideration has been given to the investment objectives, financial situation or particular needs of any specific. The readers should be aware that Rong Viet Securities may have a conflict of interest that can compromise the objectivity of this research. This research is to be viewed by investors only as a source of reference when making investments. Investors are to take full responsibility of their own decisions. VDSC shall not be liable for any loss, damages, cost or expense incurring or arising from the use or reliance, either full or partial, of the information in this publication.

The opinions expressed in this research report reflect only the analyst's personal views of the subject securities or matters; and no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or opinions expressed in the report.

The information herein is compiled by or arrived at Rong Viet Securities from sources believed to be reliable. We, however, do not guarantee its accuracy or completeness. Opinions, estimations and projections expressed in this report are deemed valid up to the date of publication of this report and can be subject to change without notice.

This research report is copyrighted by Rong Viet Securities. All rights reserved. Therefore, copy, reproduction, republish or redistribution by any person or party for any purpose is strictly prohibited without the written permission of VDSC. Copyright 2020 Viet Dragon Securities Corporation.

**IMPORTANT DISCLOSURES FOR U.S. PERSONS**

This research report was prepared by Viet Dragon Securities Corp. ("VDSC"), a company authorized to engage in securities activities in Vietnam. VDSC is not a registered broker-dealer in the United States and, therefore, is not subject to U.S. rules regarding the preparation of research reports and the independence of research analysts. This research report is provided for distribution to "major U.S. institutional investors" in reliance on the exemption from registration provided by Rule 15a-6 of the U.S. Securities Exchange Act of 1934, as amended (the "Exchange Act").

**Additional Disclosures**

This research report is for distribution only under such circumstances as may be permitted by applicable law. This research report has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient, even if sent only to a single recipient. This research report is not guaranteed to be a complete statement or summary of any securities, markets, reports or developments referred to in this research report. Neither VDSC nor any of its directors, officers, employees or agents shall have any liability, however arising, for any error, inaccuracy or incompleteness of fact or opinion in this research report or lack of care in this research report's preparation or publication, or any losses or damages which may arise from the use of this research report.

VDSC may rely on information barriers, such as "Chinese Walls" to control the flow of information within the areas, units, divisions, groups, or affiliates of VDSC.

Investing in any non-U.S. securities or related financial instruments (including ADRs) discussed in this research report may present certain risks. The securities of non-U.S. issuers may not be registered with, or be subject to the regulations of, the U.S. Securities and Exchange Commission. Information on such non-U.S. securities or related financial instruments may be limited. Foreign companies may not be subject to audit and reporting standards and regulatory requirements comparable to those in effect within the United States.

The value of any investment or income from any securities or related financial instruments discussed in this research report denominated in a currency other than U.S. dollars is subject to exchange rate fluctuations that may have a positive or adverse effect on the value of or income from such securities or related financial instruments.

Past performance is not necessarily a guide to future performance and no representation or warranty, express or implied, is made by VDSC with respect to future performance. Income from investments may fluctuate. The price or value of the investments to which this research report relates, either directly or indirectly, may fall or rise against the interest of investors. Any recommendation or opinion contained in this research report may become outdated as a consequence of changes in the environment in which the issuer of the securities under analysis operates, in addition to changes in the estimates and forecasts, assumptions and valuation methodology used herein.

No part of the content of this research report may be copied, forwarded or duplicated in any form or by any means without the prior.

**RESEARCH DISCLOSURES****Third Party Research**

This is third party research. It was prepared by Rong Viet Securities Corporation (Rong Viet), with headquarters in Ho Chi Minh City, Vietnam. Rong Viet is authorized to engage in securities activities according to its domestic legislation. This research is not a product of Tellimer Markets, Inc., a U.S. registered broker-dealer. Rong Viet has sole control over the contents of this research report. Tellimer Markets, Inc. does not exercise any control over the contents of, or the views expressed in, research reports prepared by Rong Viet.

Rong Viet is not registered as a broker-dealer in the United States and, therefore, is not subject to U.S. rules regarding the preparation of research reports and the independence of research analysts. This research report is provided for distribution to "major U.S. institutional investors" and other "U.S. institutional investors" in reliance on the exemption from registration provided by Rule 15a-6 of the U.S. Securities Exchange Act of 1934, as amended (the "Exchange Act"). Any U.S. recipient of this research report wishing to effect any transaction to buy or sell securities or related financial instruments based on the information provided in this research report should do so only through Tellimer Markets, Inc., located at 575 Fifth Avenue, 27<sup>th</sup> Floor, New York, NY 10017. A representative of Tellimer Markets, Inc. is contactable on +1 (212) 551 3480. Under no circumstances should any U.S. recipient of this research report effect any transaction to

buy or sell securities or related financial instruments through Rong Viet. Tellimer Markets, Inc. accepts responsibility for the contents of this research report, subject to the terms set out below, to the extent that it is delivered to a U.S. person other than a major U.S. institutional investor.

None of the materials provided in this report may be used, reproduced, or transmitted, in any form or by any means, electronic or mechanical, including recording or the use of any information storage and retrieval system, without written permission from.

Rong Viet is the employer of the research analyst(s) responsible for the content of this report and research analysts preparing this report are resident outside the U.S. and are not associated persons of any U.S. regulated broker-dealer. The analyst whose name appears in this research report is not registered or qualified as a research analyst with the Financial Industry Regulatory Authority ("FINRA") and may not be an associated person of Tellimer Markets, Inc. and, therefore, may not be subject to applicable restrictions under FINRA Rules on communications with a subject company, public appearances and trading securities held by a research analyst account.

Tellimer Markets, Inc. or its affiliates has not managed or co-managed a public offering of securities for the subject company in the past 12 months, has not received compensation for investment banking services from the subject company in the past 12 months, and does not expect to receive or intend to seek compensation for investment banking services from the subject company in the next three months. Tellimer Markets, Inc. has never owned any class of equity securities of the subject company. There are no other actual, or potential, material conflicts of interest of Tellimer Markets, Inc. at the time of the publication of this report. As of the publication of this report, Tellimer Markets, Inc. does not make a market in the subject securities.

#### **About Tellimer**

Tellimer is a registered trade mark of Exotix Partners LLP. Exotix Partners LLP and its subsidiaries ("Tellimer") provide specialist investment banking services to trading professionals in the wholesale markets. Tellimer draws together liquidity and matches buyers and sellers so that deals can be executed by its customers. Tellimer may at any time, hold a trading position in the securities and financial instruments discussed in this report. Tellimer has procedures in place to identify and manage any potential conflicts of interests that arise in connection with its research. A copy of Tellimer's conflict of interest policy is available at [www.tellimer.com/regulatory-information](http://www.tellimer.com/regulatory-information).

#### **Distribution**

This report is not intended for distribution to the public and may not be reproduced, redistributed or published, in whole or in part, for any purpose without the written permission of Tellimer. Tellimer shall accept no liability whatsoever for the actions of third parties in this respect. This report is for distribution only under such circumstances as may be permitted by applicable law.

This report may not be used to create any financial instruments or products or any indices. Neither Tellimer, nor its members, directors, representatives, or employees accept any liability for any direct or consequential loss or damage arising out of the use of all or any part of the information herein.

**United Kingdom:** Distributed by Exotix Partners LLP only to Eligible Counterparties or Professional Clients (as defined in the FCA Handbook). The information herein does not apply to, and should not be relied upon by, Retail Clients (as defined in the FCA Handbook); neither the FCA's protection rules nor compensation scheme may be applied.

**UAE:** Distributed in the Dubai International Financial Centre by Exotix Partners LLP (Dubai) which is regulated by the Dubai Financial Services Authority ("DFSA"). Material is intended only for persons who meet the criteria for Professional Clients under the Rules of the DFSA and no other person should act upon it.

**Other distribution:** The distribution of this report in other jurisdictions may be restricted by law and persons into whose possession this document comes should inform themselves about, and observe, any such restriction.

#### **Disclaimers**

Tellimer and/or its members, directors or employees may have interests, or long or short positions, and may at any time make purchases or sales as a principal or agent of the securities referred to herein. Tellimer may rely on information barriers, such as "Chinese Walls" to control the flow of information within the areas, units, divisions, groups of Tellimer.

Investing in any non-U.S. securities or related financial instruments (including ADRs) discussed in this report may present certain risks. The securities of non-U.S. issuers may not be registered with, or be subject to the regulations of, the U.S. Securities and Exchange Commission. Information on such non-U.S. securities or related financial instruments may be limited. Foreign companies may not be subject to audit and reporting standards and regulatory requirements comparable to those in effect within the United States. The value of any investment or income from any securities or related financial instruments discussed in this report denominated in a currency other than U.S. dollars is subject to exchange rate fluctuations that may have a positive or adverse effect on the value of or income from such securities or related financial instruments.

Frontier and Emerging Market laws and regulations governing investments in securities markets may not be sufficiently developed or may be subject to inconsistent or arbitrary interpretation or application. Frontier and Emerging Market securities are often not issued in physical form and registration of ownership may not be subject to a centralised system. Registration of ownership of certain types of securities may not be subject to standardised procedures and may even be effected on an ad hoc basis. The value of investments in Frontier and Emerging Market securities may also be affected by fluctuations in available currency rates and exchange control regulations. Not all of these or other risks associated with the relevant company, market or instrument which are the subject matter of the report are necessarily considered.
